		I IIIII I EXAMINA	.5			

U.S. Patent and Trademark Office PTOL-303 (Rev. 7-05) Continuation of 11. does NOT place the application in condition for allowance because: the applicant argues that the Fujimori reference does not disclose the intermediate insulator layer to be formed "directly" between the floating gate and the ferroelectric layer or directly between the control gate and ferroelectric material, this is erroneous as can be seen in Figs. 1 and 2 wherer intermediate insulator (10) is directly between control gate (8) and ferroelectric layer (7) and directly between floating gate (6) and ferroelectric layer. Also applicants argue that the insulator of Halliyal is not equivalent to the insulator of Fujimori, this is erroneous since both of the insulators are high K dielectric materials so they are in the same family as can be seen in Table 1 of Halliyal, since insulator (10) of Fujimori is tantalum oxide and the insulator (28) of Halliyal is hafnium oxide they are both high-K dielectric materials so the Fujimori and Halliyal reference can be combined. Therefore the rejection stands.
